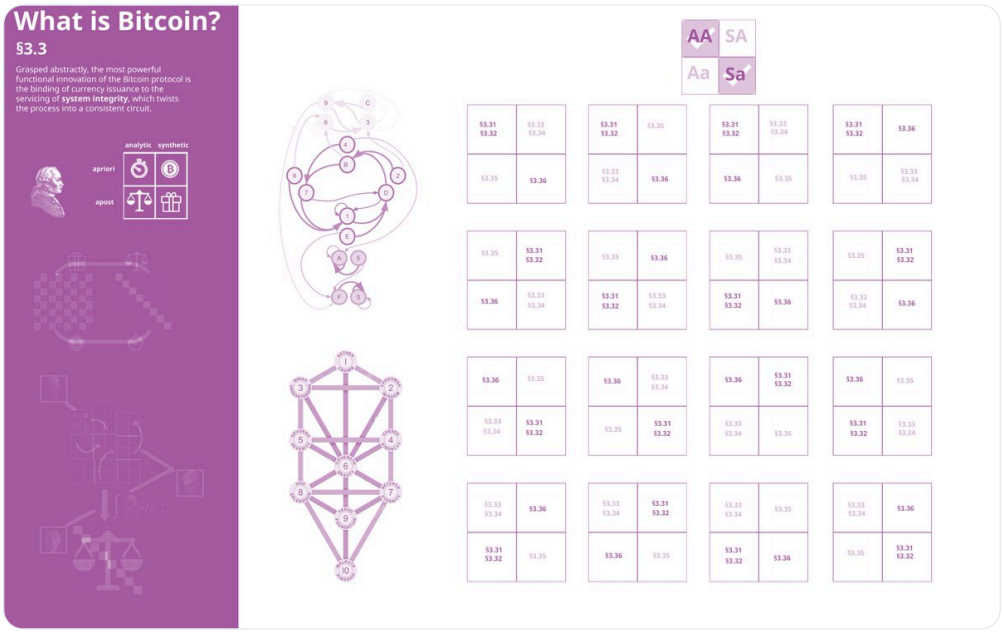
§3.37X

We read section 3.3X as containing a non-paradoxical self closure and opening, where the kantian combinatoric dialectic structure becomes the medium of conceptual affect(u)ation to the indexicalized possibilities as pseudocode for the determination of the Bitcoin future

§3.38X

Any textual fragment to be a basis vector of understanding of Bitcoin must

1) Provide full semantic mappability of any sectional permutation onto the operations of Bitcoin
2) Explain data loss from full binary content combinatoric explosion to base 10 of numeric index



The determination of the completeness of section §3.3X remains inconclusive.
